

**Quickly setup an SFTP Client to upload big files to you cloud instance for Windows Users.**

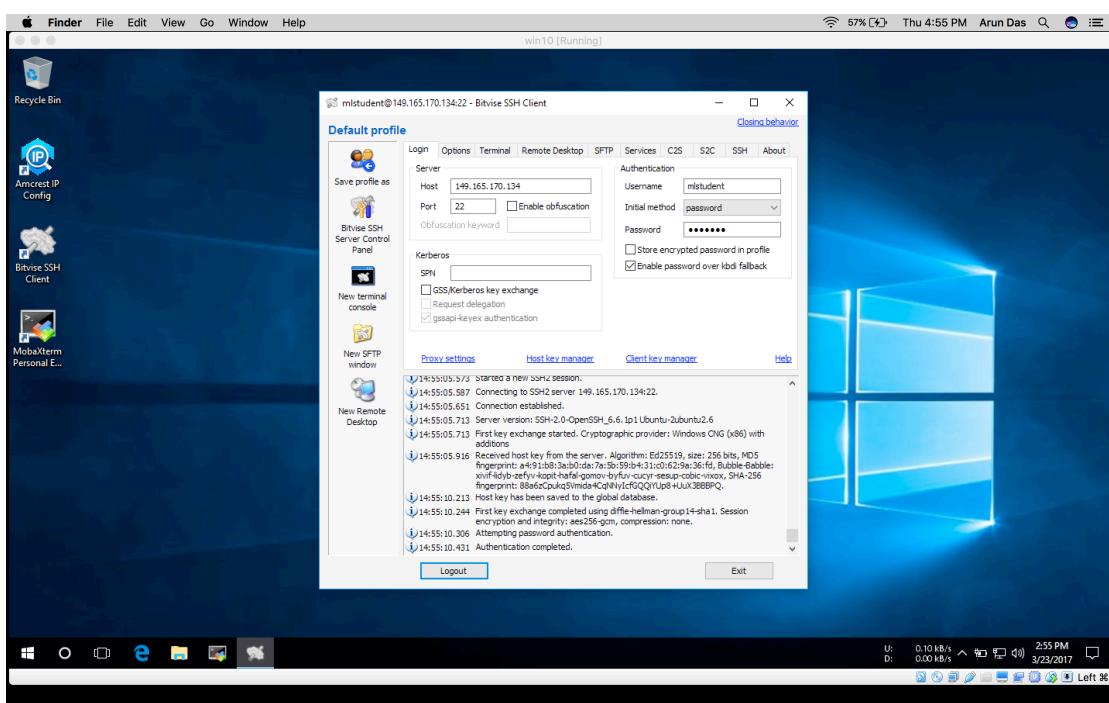

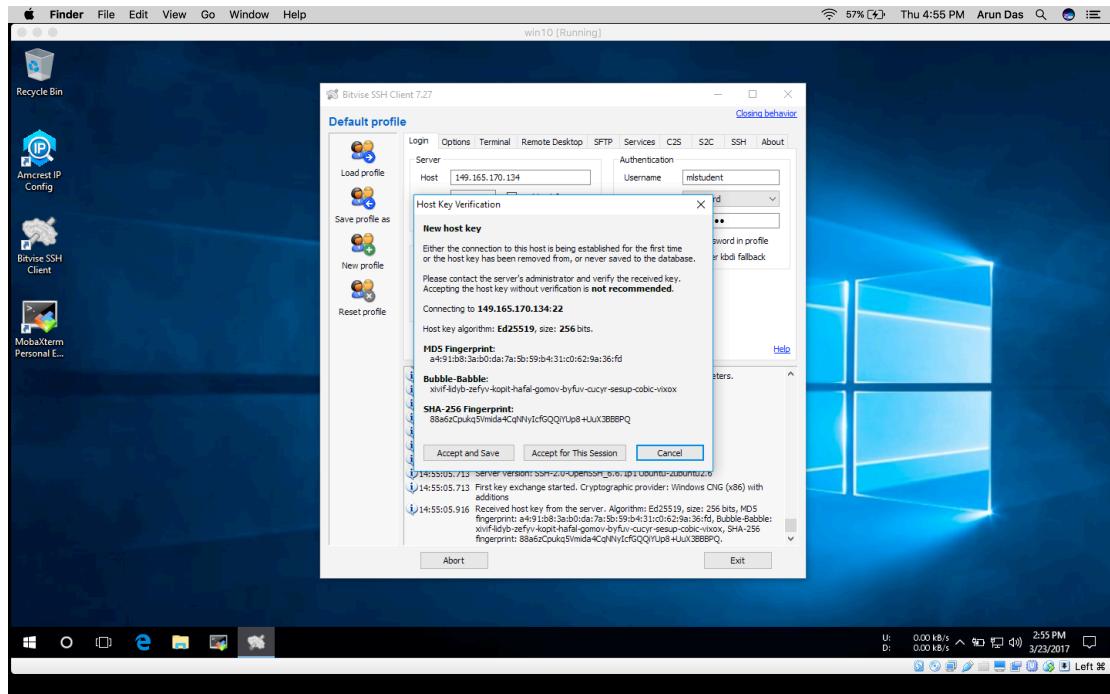

Step 1: Go to <http://www.putty.org/> and download the Bitvise SSH Client. Install and open the Bitvise SSH Client.

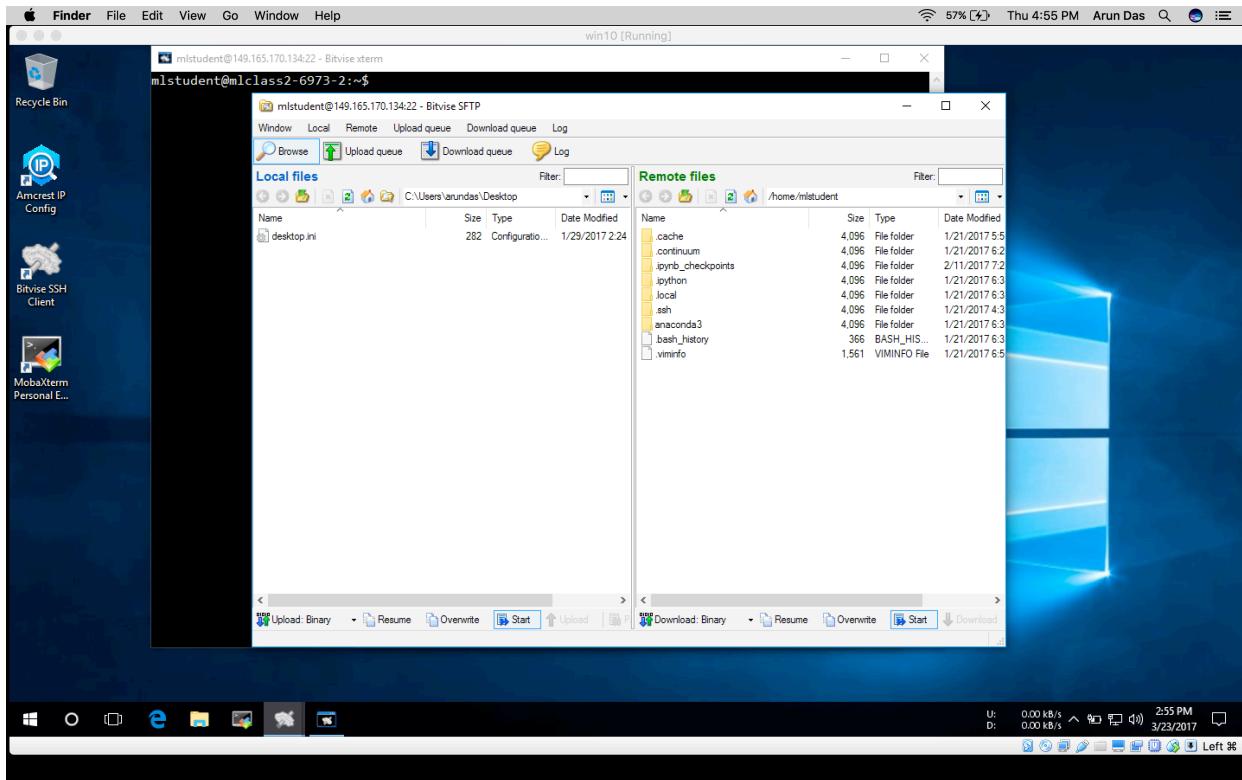

Step 2: Fill the Host, Username sections and choose “password” from the “initial methods” drop down menu. Fill in the password and hit “Login” button.

Step 3: Accept any prompts and check for errors. You should be connected to the instance by now.

Step 4: Click on the “New SFTP Window” button the left hand side. This will provide you with a similar interface. The left hand side is your local machine files and the right hand side shows the files in remote host.

You can use the terminal window to run commands as well. A quick way to see if file is sent properly or not.
